

Research & Development Scientist

Sciona is looking for an individual that enjoys working in a professional, regulated, dynamic, fast-paced, ever changing entrepreneurial environment. A candidate for this Research & Development Scientist position requires 2 – 3 years experience in genetics and/or molecular biology and a PhD in Nutritional Science.

The Research & Development Scientist will keep abreast of scientific literature through tracking utilizing both automated and manual systems. R&D scientist will be responsible for maintenance of database of scientific literature, and will provide regular updates to the rest of the R&D team. Assist with maintenance of Intellectual Property Profile. Work closely with the rest of the R&D team and the Sales and Marketing group to ensure that the information contained in any corporate material is accurate and updated on a regular basis.

Essential Skills/Knowledge required

- Proven management of Scientific Literature
- Help to identify Gene/Nutrient/Environmental targets
- Assist in the communication and education of the process
- Work with colleagues to achieve common goals

The ideal candidate will have a positive attitude, team-oriented focused, dedication and motivation to carry out duties to the best of their abilities and enjoy working with a professional team and most important of all, the ability to maintain a good sense of humor under pressure.

Interested parties should send resumes by email (please do not telephone) to:
