THE INSTITUTE
COLORADO BIOSCIENCE

Meg John
Vice President
Colorado BioScience Institute

Since starting with the Institute in 2014, she works to grow experienced life sciences professionals in Colorado with her leadership of the Institute's workforce development initiatives. She secures programmatic funding for leadership and job training, cultivates and sustains partnerships between companies and schools, and grows startup programs for the Institute to diversify and increase the talent pipeline in Colorado.

Meg worked with the Colorado BioScience Association leaders to establish the Institute in 2014. Prior to her work at the Institute, she developed and managed teacher professional development and school district partnership programs for the Denver Museum of Nature and Science, serving more than 3,000 teachers and 5,000 students in 60 schools each year. Meg has a long-term track record of building successful programs and developing strategic partnerships with the STEM community to support STEM education and workforce development.

She holds a Master of Science degree in experiential education from Minnesota State University and a Bachelor of Arts in in environmental science and anthropology from the University of Notre Dame.
