DATA, DATA & MORE DATA.
Best Practices to Address Bio/Pharma Process Data Management Challenges

Skyland Analytics

Complex processes, rising data volumes, numerous teams, sites and partners, disparate systems, paper and spreadsheets, accelerated timelines, regulatory scrutiny – all contribute to the challenge bio/pharma sponsors and manufacturers face to ensure product, process and batch data can be trusted and used to efficiently produce the highest quality products.

Over the course of 4, 45-minute live and interactive web-based panel discussions, you will learn how industry thought leaders are addressing the complexities of data management and walk away with real-life best practices to implement in your own organization. Each session focuses on a specific area of importance and includes a diverse set of insights from Sponsors, CMOs, Service Providers and Consultants.

Separate registrations are required for each session.
